Format: [Web](#) • [PDF](#) • [Word](#) • [OpenDocument](#)

Summary

Ryan Parman is a cloud-native engineering leader, who specializes in technical leadership, software development, site reliability engineering, and cybersecurity for the modern web. Excels at listening, adapting, and driving continuous improvement.

Small business owner, two-time startup founder, and creator of two open-source projects with millions of users each. Ryan has a proven track record of building high-quality software, delivering impactful solutions, and elevating team performance.

Work Experience

[McGraw Hill](#) — Remote (since COVID), previously Seattle, WA

McGraw Hill is a learning science company which produces textbooks, digital learning tools, and adaptive technology to enhance learning. It is one of the “big three” educational publishers in the U.S, and was acquired by Platinum Equity 2021.

Principal Engineer, Cloud Center of Excellence (January 2024—October 2024)

- Joined a team whose mission was to provide guidance and support in the cloud journey of the entire organization.
- Started development on v2 of a project which scanned ~200 AWS accounts for misconfigurations and vulnerabilities. Goal was to reduce an [AWS Well-Architected](#) review from 2 weeks to 2 hours with automated scans, enabling more reviews annually (10 → 100).
- Proposed best practices, guardrails, and security measures to ensure a secure and efficient cloud environment.
- Identified opportunities to extend the security measures and guardrails devised for AWS to other cloud platforms.

Principal Cloud and Platform Engineer (June 2020—January 2024)

- Led the team who supported all SRE and product engineering teams, scaling core platforms and services as every school in America transitioned to online learning during the COVID-19 lockdowns.
- Managed the Base [AMI](#) program (server disk images). Leveraged insights from [CIS](#), security patching, and internal needs to develop a unified build pipeline integrating best practices. Reduced time-to-boot, and eliminated engineering toil (1 → 10).
- Conducted comprehensive scans of [Route 53](#) to obtain a mapping of the company’s thousands of active websites. Prioritized identifying and remediating misconfigurations, rotating certificates, and increasing visibility.
- Grew and ran a project which scanned ~200 AWS accounts for high-priority misconfigurations and vulnerabilities. Included a high-level score (friendly competition), explanations of the issues (security education), and instructions for fixing (driving forward). Became a trusted tool across the organization (1 → 10).
- Spearheaded the [Artifactory](#) Rebuild project. Ran the project from inception to completion, including the majority of development. Directed effort across ~80 teams and ~300 services to complete the project.
- Adapted the *Monitoring-as-Code* tooling/methodology to abstract-away the underlying vendor, streamlining a vendor migration ([New Relic](#), [Datadog](#)) (1 → 10).
- Led dozens of smaller projects, offered guidance to engineers on best practices, and documented knowledge.

Engineering Manager, Site Reliability (October 2018—June 2020)

- Led the [Site Reliability Engineering](#) (SRE) team in addressing macro-oriented problems affecting engineering teams, empowering greater self-service.
- Established a process for maintaining reusable [Terraform](#) modules which teams leveraged to compose infrastructure with minimal effort.
- Customized the [Amazon Linux](#) AMIs to comply with Level-2 [CIS](#) Guidelines for both Amazon Linux and [Docker](#). Liaised with cybersecurity, operations, and business units to ensure compliance (0 → 1).
- Invented custom security and operational tooling to understand the current posture of AWS accounts where off-the-shelf tools did not meet the needs of the organization (0 → 1).
- Reduced the time to deploy a new service from dozens of weeks to a single meeting by implementing a *Monitoring-as-Code* methodology, and defining broad-use [Service Level Objectives](#) (SLOs) ([New Relic](#), [Datadog](#)) (0 → 1).

Staff Software Engineer (October 2016—October 2018)

- Led the development of Tier-1 services within the educational content authoring pipeline, leveraging technologies such as [REST](#), [GraphQL](#), API design, [Amazon ECS](#) (similar to [Kubernetes](#)), [Docker](#), [Terraform](#), [ePubs](#), and security best practices.

- Led the development of the authoring component of the [SmartBook 2.0 product](#), and the internal system which indexes authored content, builds ePubs, and encodes images/video for the ePub CDN using [ffmpeg](#).
- Established the technical direction of these projects, promoted adoption across the organization, published comprehensive documentation, and offered ongoing integration guidance.
- Accelerated the adoption of CI/CD, rapid deployment practices, and Docker containers, shortening the feedback loop for developers and increasing the reliability of deployments.

[WePay](#) — Redwood City, CA

WePay is an online payment service provider which provides “payments for platforms”, where examples of platforms are GoFundMe, Care.com, and Xbox. It was acquired by JPMorgan Chase in October 2017.

DevOps Engineer (April 2015—September 2016)

- Led a cross-company initiative to upgrade the monolithic application from [PHP 5.4](#) to [PHP 5.6](#) (the latest at the time). Facilitated cross-team collaboration among all major engineering teams and QA departments to achieve results.
- Initiated a program to automate the creation of base server images for cloud servers. This allowed new servers to boot and begin serving traffic ~75% faster.
- Invested in monitoring and alerting systems to prevent customer-facing issues ([New Relic](#), [Grafana](#)).
- Explored *configuration-as-code* for cloud infrastructure in [Google Cloud Platform](#) in order to improve reliability and efficiency.

Senior API Engineer (April 2014—April 2015)

- Led the company's [HackerOne](#) program, coordinating across teams to address security issues.
- Built a development environment for engineering teams. Reduced new engineer onboarding time from 2 weeks to 1 day.
- Expanded WePay's payment security offerings by designing MFA-as-a-Service (U.S. patent filing [US15042104](#)).

[Amazon Web Services](#) — Seattle, WA

Amazon Web Services provides on-demand cloud computing platforms and APIs to individuals, companies, and governments, on a metered, pay-as-you-go basis.

Web Development Engineer II (March 2010—April 2014)

- Created the [AWS SDK for PHP](#), enabled AWS to reach the largest developer group — [PHP](#).
- Initiated the creation of [AWS SDK for PHP](#) v2 to address changes in the PHP language and growth of AWS services.
- Led one of the first teams to provide reusable UI building blocks for the [AWS Management Console](#), by collaborating directly with the AWS Design team.
- Invested in increased transparency, better communication, and improved tooling for developers. [[Examples](#)]

Older roles and side projects

Older roles and side projects are truncated for brevity. If interested, *details* can be found [on GitHub](#).

- [Northwood Labs](#) — Owner (January 2024—Present)
- PCR Publishing (Side-Project) — Editor, Typesetter, Publisher, Book Producer (April 2021—April 2022)
- Perimeter of Wisdom, LLC (defunct) — Co-Owner, CTO, Producer (February 2015—2018)
- CloudFusion (Open-Source Project) — Creator and Developer (Early 2005—March 2010)
- Rearden Commerce (now [Deem](#)) — Senior User Experience Developer (July 2008—March 2010)
- [WarpShare](#) (defunct) — Co-Founder and Chief Information Officer (September 2006—March 2010)
- [SimplePie](#) (Open-Source Project) — Creator and Co-Developer (July 2004—October 2009)
- [Yahoo!](#) — Front-end Developer (Contract), Yahoo! Messenger (November 2007—January 2008)
- [Stryker](#) — User Interface Developer (Contract) (May 2005—September 2006)
- [Digital Impact](#) (now part of [Axcium](#)) — Production Specialist (March 2004—April 2005)

Projects

Proof that I can code, call APIs, interact with SDKs, and build user-facing software. I have live-coding anxiety, so live-coding interviews will always present me at my worst, not my best.

- **DevSec Tools:** Building a [website](#), [CLI tool](#), and [Go library](#) for identifying potential security configuration issues (in-progress).
- **Custom Linux Packages:** Building a [repository of custom Linux packages](#) (in-progress).
- **CSP Evaluator:** Building a [parser and evaluator for Content Security Policy \(CSP\) directives](#) in Go (in-progress).
- **Terraform Provider:** Built a [custom provider](#) which provides a set of utility functions for use in Terraform/OpenTofu.

- **Multi-Platform Docker:** Built a [downloader for GitHub release assets](#) which simplifies building multi-platform images.
- **AWS Organization Security:** Built a [library + CLI tool](#) which simplifies the hub-and-spoke pattern for multi-account orgs.
- **AWS Session Manager:** Built a [TUI](#) for [simplifying connections to SSM-enabled EC2 instances](#) using your Terminal.

Examples of Technical Documentation

Much of my other work is published inside of corporate Confluence/wikis. Here are examples of my public-facing documentation:

- [Setting up macOS for development](#)
- [Local AWS Lambda environments \(with Go\)](#)
- [Local development environment \(devsec-tools\)](#)
- [Configuring DataGrip for Valkey \(devsec-tools\)](#)
- Diagrams of Artifactory [infrastructure](#) and [software](#) configuration.
- Diagram of a [secrets-rotation system](#).

Recommendations

See a [selective list of recommendations](#) from co-workers and peers.

Groups and Accomplishments

- U.S. patent filing, ["System and Methods for User Authentication across Multiple Domains"](#) (US15042104) (2016)
- U.S. patent filing, ["Hive-based Peer-to-Peer Network"](#) (US8103870B2) (2007)

Skills

This list is not exhaustive, but these are software and skills I leveraged in the roles above which are most relevant to Software Engineering and DevTools roles.

CI/CD, CLI tools, [AWS](#), [Bash](#), [CircleCI](#), [Docker](#), [GitHub Actions](#), [Git](#), [Go](#), [GraphQL](#), [JWT](#), [JavaScript](#), [PHP](#), [Python](#), [Redis](#), [Vagrant](#), [XSLT](#), [twelve-factor applications](#), automation, code generation, containerization, debugging, development, distributed, documentation, integration, microservices, multi-platform, optimization, performance, platforms, refactoring, scalability, security, standards, test-driven development, testing.

Education

Silicon Valley College (now [Carrington College](#)), San Jose, CA. Bachelor of Arts, *Design and Visualization*
